Executive Summary

This internship report, titled "A Study on Customer Satisfaction Towards Sugar Products of Shri Hiranyakeshi Sahkari Sakkare Karkhane Niyamit(SHDDKN), Sankeshwar," was the conducted to know the customers perception of satisfaction identify to know what factors affect while customers purchasing sugar products. A strongest rate of customers contentment is fundamental to business success, particularly in the highly competitive sugar industry, where consumers evaluate products based on quality, price, packaging, availability, and overall value.

The study aimed to examine the using a descriptive research design, and The research was undertaken using information that collected from primary and secondary source were used. To achieve objective of study, the data was obtained from the 100 respondents through a survey questionnaire was gather primary data, while supportive information collected from the company records, books, journals, and the other relevant publications. The study focused on understanding customer opinions regarding the product quality, pricing, package, availability, purity, dealer behaviour, taste, and overall customer satisfaction.

The internship at the sugar factory was really good. I learned a lot about how the sugar factory works from the inside. The internship helped me understand more about production at the sugar factory marketing at the sugar factory and customer services, at the sugar factory. My knowledge of the sugar factory increased because of the internship. I have acquired knowledge on research methodology as well. It helped me to practically apply what I had learned during my MBA. I could see how the theories taught in class are put to practical use. The internship at the sugar factory was indeed an experience.

After analyzing the entire paper, one thing worth nothing about the company is that SHDDKN is an organization which has managed to come up with a good reputation for itself given the quality sugar products it provides to its customers at affordable prices.

CHAPTER – 01

1.1 INTRODUCTON

Customer satisfaction is matters a lot for marketing because a company's success is largely shaped by how it meets what its customers want. These days customers want more than cheap products. They also want quality something they can rely on and they want it to be easy to get. When customers get a deal from a product they will probably keep buying it and tell other people about it. So it is really matters to know what customers like and guarantee their contentment with what they get because this is crucial for a business to sustain and do well in the run. Customer satisfaction is the key to the success of a company and customer fulfilment plays key role in the overtime development and sustainability of any business, like customer satisfaction.

The sugar industry is really important to the economy. It helps with farming and development in areas. Sugar is something we use every day. All types of peoples eat sugar. There are types of sugar available in stores. So when people buy sugar they think about things, like how good it's how much it costs what the package looks like and what they think of the factories that makes it. This is the reason sugar factories need to guarantee their customers stay happy. This helps them stay step ahead in market and keep their customers coming to buy sugar from them

shri Hiranyakeshi Sahkari Sakkare Karkhane Niyamit(SHDDKN), Sankeshwar, stands out as well-known cooperative sugar mill operating in Karnataka. The factory has been making sugar products since it started. The factory wants to help farmers and the people who buy sugar. The factory has earned recognition for doing things. It makes sure the sugar is good. It is made quickly. The people who buy the sugar are happy because the factory thinks about them. The factory does not just make sugar now. It also makes alcohol. Generates power. This has helped the factory do overall.

Customer satisfaction is really important to see if people like a product and if it does well in the market. When we know what customers think and what they go through it helps factory find things they can do better and make plans to sell their products. What customers feel about depends on a few factors, such as a product, including how good the product is, how pure it is, the price, the design of the package and how easy it is to get. If factories understand these things they can help their relations with customers better.

1.2 INDUSTRY PROFILE

The sugar industry is quite crucial for India. It helps our country grow economically. This industry is like a connection between farming and other industries. It gives jobs to a lot of people like farmers and workers. Sugarcane is a crop that people grow to make money. So the sugar industry does a lot for people who live in areas and it helps farmers have better lives. The sugar industry is very good for India. It helps the sugar industry to grow more. The sugar industry is also good, for farmers who grow sugarcane..

India stands as one of sugar producers in the world. The sugar industry is quite crucial, for the country's farming economy. People grow sugarcane. It can apply for producing sugar and provide employment opportunities to many people. Some professions are related directly to sugar and sugarcane. Sugar industry provides support to those industries which use press mud, bagasse, and molasses as byproducts of sugar production. In fact, these by products are very useful. Generate more income for sugar factories. The sugar industry is crucial for producing sugar.

Karnataka is a key sugar producing state in India. The weather in Karnataka is really good for growing sugarcane. Karnataka has sugar factories that belongs to the people and some that are owned by private companies. These sugar factories in Karnataka help a lot with farming and industry in the state. The sugar factories in Karnataka do a lot of things for people who grow sugarcane. They give people a place to sell their sugarcane. The sugar factories, in Karnataka also give people jobs. Help the rural areas of Karnataka have more money.

The sugar industry is really important. It has been having some issues. These issues include sugar prices that go up and down the fact that the sugar industry hinges on the weather the expense producing sugar is getting higher and the government keeps changing its policies. The sugar industry is affected by all these things. But the sugar industry is always trying to improve and do things like making ethanol and people, in the country are using more sugar so the sugar industry has a lot of chances to grow in a good way.

1.3 COMPANY PROFILE

Shri Hiranyakeshi Sahkari Sakkare Karkhane Niyamit(SHDDKN), Sankeshwar, stands out as of the prominent cooperative sugar producing industries in Karnataka has made a substantial contribution o advancing the sugar industry alongside promoting the welfare of farmers in the region. It was established in 1956. Along with making money for sugarcane farmers, this was meant to facilitate development in rural areas.

The factory has good facilities. This means equipment, storage spaces, labs and additionally, other factors help with making stuff. The factory also makes sure the workers have a place to work and things they need. The people in charge work, with the staff. They try to get everyone to work together to help the factory do what it is supposed to do. The factory uses a plan to get what it wants. It helps the workers work together. The factory's management team does this to help the factory achieve the factory's goals.

Shri Hiranyakeshi Sahkari Sakkare Karkhane Niyamit(SHDDKN),Sankeshwar, has established an extensive network for the sourcing a sugarcane and supplying the sugar products. The organization serves customers in different regions and has gained the trust of consumers through its commitment to quality and timely supply. Its emphasis on customer

satisfactions and continuous improvement has helped the factory to maintain a strong position in the competitive sugar industry.

Apart from its industrial activities, the factory is contributed significantly to the social and economic development of surrounding areas. It also generated employment opportunities, supported the livelihood of thousands of farmers, and made a major contribution to improving the standard of living in rural communities. Through its sustained efforts and commitment towards growth, the organization has emerged as one of the leading cooperative sugar factories in Karnataka state

Today, Shri Hiranyakeshi Sahkari Sakkare Karkhane Niyamit(SHDDKN), Sankeshwar, is continues focus on their quality, innovations, and sustainable development. Organization has a base and people in charge who recognize what they are doing. They pay close attention to their customers. The organization wants to get done the market and have success that lasts for quite a while. The organization is looking to the future. Wants this success to happen as time goes on the organization is about making its market presence stronger. This is what the organization is working towards to have long-term growth and be around, for a time.

Vision

- To be a leading and trusted Cooperative Sugar Factory known for quality products and customer satisfaction.
- To bring about sustainable development by adopting modern technology and effective management practices.
- To enhance the economic well-being of farmers and to assist in the development of rural communities.
- To achieve high quality, productivity and environment care in all business activities.
- To continuously improve and innovate to provide a enduring value for the customer, employees, members and society.

Mission

- To produce and supply quality sugar and allied products to the contentment of the customer.
- To give proper support and prompt services to sugarcane growers and safeguard their interests.
- To use resources efficiently and to adopt advanced technologies to improve productivity and operational performance.
- To promote the sustainable industrial growth and to foster the environmentally safe practices.
- To build up long-term and solid relations with customers, suppliers, dealers and other stakeholders.
- To contribute to the socio-economic progress of the surrounding regions by responsible business practices.

1.4 PRODUCTS

Sugar

Sugar is the principal product of the Shri Hiranyakeshi Sahkari Sakkare Karkhane Niyamit(SHDDKN), Sankeshwar. The factory makes crystal sugar. It does this by processing sugarcane that it gets from farmers who live nearby. People usually use this sugar at home. Hotels and bakeries also use it. So do food processing industries. The factory has been doing a job for a long time. It always makes sure the sugar is quality. The factory also takes care that people can buy the sugar when they need it. This is why people trust the factory and its sugar.

Molasses

The sugar manufacturing process produces molasses as a by-product. The factory does not throw away molasses. They use it for industrial purposes. Molasses is an ingredient, for making alcohol and ethanol. Molasses also helps the organization earn money. The factory uses molasses in a good way. This helps the factory work well and improve its efficiency. The factory makes use of molasses. Molasses helps the sugar manufacturing process to be more efficient.

Rectified Spirit

The distillery unit of the factory products are rectified spirit, which finds application in the pharmaceutical, chemical, and industrial sectors. The production of rectified spirit has enabled the organization to diversify its operations and create additional sources of revenue. This has helped the factory maintain stability even during fluctuations in sugar prices.

Power Generation

The factory has established a co-generation plant that produces electricity using bagasse, which is obtained after crushing sugarcane. The factory uses this process to meet its power needs and it helps to use by-products in a better way. This process supports building up of the factory by reducing the energy from traditional sources like coal or oil. The factory uses development to reduce its dependence, on conventional energy sources and this process is a big part of that.

Press Mud

Press mud is really useful. We get press mud when we make things in a factory. People use press mud to make the soil better. This is good for the farmers because it helps them grow food. Farmers like to use press mud as a fertilizer. Press mud is natural and good for the earth. The factory is helping us in two ways. The factory is helping with industry. The factory is also helping the farmers with press mud.

Services to Farmers and Customers

The factory does a lot of things besides making products. It works closely with sugarcane growers to make sure it gets the raw materials it needs. The factory has a system put in place to get its products to different markets. This firm is very focused on quality and making customers happy. This has aided the organization build relationships, with sugarcane growers, dealers and the consumers, the sugarcane growers and the dealers over many years.

AREA OF OPERATION

Shri Hiranyakeshi Sahkari Sakkare Karkhane Niyamit(SHDDKN), Sankeshwar, operates across several parts of Karnataka and extends into nearby areas of Maharashtra. The factory has built a relationship with sugarcane farmers over the years. Today sugarcane farmers from villages in and, around Belagavi district regularly bring sugarcane to the factory. The factory gets sugarcane from these sugarcane farmers all the time. This helps the factory make sugarcane products through the season when sugarcane is harvested. The factory can keep producing because it gets a supply of sugarcane from these sugarcane farmers.

The factory does well beyond simply making sugar. It starts with the people who grow sugarcane the factory collects sugarcane from these growers. Then they transport the sugarcane to the mill where they process sugar and after that they send the sugar to stores through people who sell things people who sell to stores and people who give things to others to sell. The factory is involved in every step of making sugar from the farm the store so they can make sure the sugar is good, at every step and people can buy sugar when they want it.

The factory is very important. It provides employment opportunities to the locals and helps thousands of farmers sell their products. Not only does it boost peoples earning if they are working in the sugar industry, yet it remains really good for local areas economy in the closeness of the factory. Families in the region have profited a lot from the factory because it provided them with an earning opportunity. For these families, the sugar industry is very important, and one of its most important aspects is the factory.

The factory has gained some respect. This is because the factory is a place that can make money and also help the community and farmers at the same time. The factory does this because it really wants to help the region grow and make sure the farmers are doing well. The factory helps the community and takes care of the farmers when it does business. The factory is doing a job of serving residents of the local area and protecting the farmers.

INFRASTRUCURE FACILITY

1.Land and Building

Shri Hiranyakeshi Sahkari Sakkare Karkhane Niyamit(SHDDKN), Sankeshwar, is situated on a large piece of land in Sankeshwar town, Belagavi district. The factory premises include the main manufacturing plant, administrative office buildings, warehouses, a staff colony, canteen, and other support structures. The buildings have been constructed and expanded in phases over the years as the factory grew in size and capacity. The layout is developed to allow smooth movement of raw materials, vehicles, and finished goods within the premises.

2. Plant and Machinery

The sugar mill operates with a crushing capacity of 10,000 TCD; this is the highest among cooperative sugar factory in Karnataka. The plant equipped multiple milling tandems, juice extraction machinery, evaporators, vacuum pans, centrifugal machines, and sugar drying and grading equipment. These machines work in a continuous sequence from the moment sugarcane enters the factory to the point where bagged sugar is ready for dispatch.

3. Boilers and Steam Generation

The factory operates high-pressure boilers that use bagasse the fibrous material is remaining after extraction of juice as fuel. These boilers generate large quantities of steam, which serves two purposes: it is used directly in the sugar manufacturing process for heating and evaporation, and it also drives turbine generators to produce electricity. The boiler house is most critical sections of the plant, as any breakdown here affects the entire production line.

4. Co-Generation Unit

The co-generation plant has an installed capacity of 52 megawatts. It runs on the steam produced from the bagasse-fired boilers. The electricity generated is first used to meet the factory's own requirements powering the mill, distillery, office buildings, and staff colony. The surplus power that remains after internal consumption is exported to the Karnataka Electricity Board under a formal agreement. This unit contributes meaningfully to the factory's annual revenue and also reflects the factory's commitment to making use of every sugarcane.

5. Distillery Unit

The distillery is the older units within the factory, having been set up in August 1972. It started with a capacity of 18,000 litres per day and has been expanded multiple times over the decades. The current operational capacity stands at 54,000 litres of rectified spirit per day.

The Central Government has approved a further expansion from 54 KLPD to 100 KLPD along with the establishment of a new 100 KLPD ethanol unit. This expansion is being funded partly through bank loans of Rs. 40 crores sanctioned under a government scheme. Once fully operational, the distillery and ethanol units together are expected to significantly increase the factory's revenue from by-products.

6. Effluent Treatment Plant (ETP)

Given the scale of operations, the factory generates considerable liquid waste, particularly from the distillery. An effluent treatment plant (ETP) has set up to handle this. The spent wash from the distillery is currently treated through a composting-based method. However, as the distillery capacity expands to 150 KLPD, the factory plans to shift to a concentration-based treatment method using a multiple effect evaporator and dryer system. A condensate polishing unit is also being established to support the proposed expansion of sugar crushing to 11,000 TCD.

7. Warehousing and Storage

The factory has dedicated warehouse space for storing finished sugar, which is kept in bags and stacked under proper conditions to maintain quality. Separate storage areas exist for chemicals, spare parts, general stores, and co-generation stores. Adequate inventory of spare parts and consumables is maintained to avoid production stoppages during the crushing season.

SWOT ANALYSIS

STRENGTHS

- The factory has been serving the industry since 1961, giving it over six decades of experience and strong farmer trust in the region.
- It holds the highest crushing capacity of 10,000 TCD among cooperative sugar mills in Karnataka.
- Revenue comes from multiple sources sugar, ethanol, rectified spirit, and co-generated power which reduces dependence on sugar prices alone.
- Wide procurement network covering 310 villages across Karnataka and Maharashtra ensures steady cane supply.
- The factory has received several national and state-level awards for technical efficiency and co-generation performance.

WEAKNESSES

- High production costs.
- Dependence on sugarcane availability.
- Limited promotional activities.
- Seasonal nature of operations.

OPPORTUNITIES

- The national ethanol blending programme offers assured government offtake at fixed prices, which the factory is well placed to benefit from after its ethanol expansion.
- High demand for the renewable energy that strengthens the case for expanding co-generation capacity and exporting more power to the grid.
- Planned to expansion of the sugarcane crushing capacity to 11,000 TCD will increase overall output and by-product generation.
- Government subsidies and interest subvention schemes available for sugar and ethanol sectors can ease financial pressure.
- Rising agricultural activity in Belagavi district may increase cane availability in coming years.

THREATS

- Irregular monsoon and climate variability can reduce cane supply and directly impact production volumes.
- Competition from nearby mills like Ugar Sugar Works, Krishna SSK, and Renuka Sugars creates pressure during low cane supply years.
- Sugar being a commodity means prices fluctuate, and falling prices can push the factory into losses quickly.
- Stricter environmental regulations around effluent treatment require ongoing investment and compliance efforts.

FUTURE GROWTH AND PROSPECTS

1. Expansion of the Crushing Capacity

The factory currently crushes 10,000 TCD and has proposed to expand this to 11,000 TCD. To support this, the Effluent Treatment Plant (ETP) has already upgraded and a Condensate Polishing Unit is being established. This expansion will increase sugar output and by-product generation in the coming seasons.

2. Upgradation of Spent Wash Treatment

As distillery capacity grows, the factory plans to replace the existing composting-based effluent treatment with a modern concentration system using Multiple Effect Evaporators and dryers. This will support compline with environmental regulations and support uninterrupted operations.

3. Strengthening Co-Generation

The co-generation plant operates at 52 MW and exports surplus power to the Karnataka Electricity Board. With increased crushing capacity, more bagasse will be available, which can support higher power generation and additional revenue from grid export.

4. Regional Development

As the factory expands, it will be generate a more employment for local peoples and support increased cane farming in surrounding villages. This is consistent with the factories original mission of uplifting the rural economy of the Belagavi region.

CHAPTER 02

CONCEPTUAL BACKGROUND AND LITERATURE REVIEW

2.1 THEORETICAL BACKGROUND OF THE STUDY

Customer satisfaction is the top in terms of studied concepts in the marketing and consumer behaviour. It plays a central role in determining whether a business succeeds or struggles in the market. For any product whether it is the luxury item or a daily use commodity like sugar the satisfaction of the end customer ultimately decides the long-term survival of the brand.

This study focuses on understanding customer satisfaction towards sugar products of Shri Hiranyakeshi Sahkari Sakkare Karkhane Niyamit(SHDDKN), Sankeshwar. To build an academic study it is important to understand what customer satisfaction means. Customer satisfaction is a thing. We need to know how customer satisfaction is measured and what factors influence customer satisfaction. Certain additional models also come to explain customer satisfaction. These models very useful to understand customer satisfaction.

Meaning and Definition of the Customer's Satisfaction

Customer's satisfaction is when a products or services are really good and it does what the customer thought it would do. When you buy sugar you need it to be quality, the right weight and the right price. If the sugar is all of these things or even better then you are pleased with it.. If the sugar is other than what you anticipated, like if it is bad quality or not enough or too expensive then you end up unhappy with it. If a client is happy with the product purchased, then it meets demands. Satisfaction of the customer's is crucial since it implies happiness with the product.

Importance of Customer Satisfaction

- Repeat business from a happy customer guarantees steady income for the company..
- Higher satisfaction helps to reduce customer complaints so which lower oprational cost.
- Customer satisfaction also enhances Hiranyakeshi Sugar Factory's standing among trading partners and the farming community.

Factors Influencing Customer Satisfaction in Sugar Products

So customer's satisfaction is not about one thing. It is a figure of things that come together to make the customers experience with the sugar products. When we talk about sugar products a few key things that count to the customer satisfaction of sugar products

1. Product Quality The quality of sugar is really important. People see the colour of sugar how big the grains are, how pure it is and if it has any moisture or other things in it. When the sugar is good every time you buy it that makes people trust the company. They're content with it, for a long time. The standard of sugar is what matters the most.

2. Price People who buy Sugar really care about the price in small towns and villages. They always look at the prices of brands and stores. If the price of Sugar seems justified for what you're getting that makes people happy.. If Sugar is too expensive even if it is genuinely good service means people don't want to buy it. The price of Sugar need to be right, for the quality you get or people will go else to buy their Sugar

3. Packaging Packaging is really important. It does two things for sugar. First it keeps the sugar clean and dry. This means the sugar does not get contaminated. The packaging also tells us some things about the sugar. We can see how much the sugar weighs. We can even see if it has an FSSAI certification. When the packaging looks nice and is sturdy people are more likely to trust the sugar. They feel better, about buying it when the packaging's attractive and strong. This is because the packaging of sugar makes people confident that the sugar is good. The packaging of sugar is what people see first. It has to be good.

4. Availability Sugar is purchased frequently and customers expect it to be available at their nearest store at all times. Poor distribution and stock-outs are among the leading causes of brand switching. A factory that maintains strong distribution ensures higher satisfaction levels.

5. Quantity Accuracy Customers expect to receive exactly the quantity printed on the pack. Any shortage, even if small, creates a strong sense of being cheated. Accurate weight is therefore a basic expectation that must be met without exception.

6. Dealer and Retailer Behaviour The behaviour of the shopkeeper or dealer from whom the customer buys also affect satisfaction. A helpful, honest, and responsive dealer creates a positive buying experience, while a rude or dishonest one leaves a negative impression even if the product itself is good.

7. Brand Image and Trust For cooperative mills, brand image is closely tied to the institution's reputation in the community. A factory that is known to pay fair prices to farmers and deliver quality products to consumers naturally enjoys a positive image, which contributes to customer satisfaction.

2.2 LITERATURE REVIEW

1. Philip Kotler (2000)

Kotler In his book Marketing Management, Kotler clarified that the foundation of contemporary marketing philosophy is customer satisfaction. He maintained that companies that continuously meet the needs of their clients typically expand more quickly and sustainably than those that only prioritize immediate profits. He underlined that happy consumer's act as brand ambassadors, spreading the word about products at no extra expense to the business. This study is the pertinent because it is demonstrates how crucial customer satisfaction is as a marketing objective.

2. Oliver, R.L. (1980)

Oliver created the Expectancy Disconfirmation Model, which is now one of the satisfaction research frameworks that is most frequently cited. According to his research, consumers compare their pre-purchase expectations with their post-purchase experiences, and satisfaction is determined by this comparison rather than the experience alone. Additionally, he discovered that consumers' processing of this comparison is significantly influenced by their emotions. This is pertinent to the sugar industry because consumers consistently have expectations regarding price, weight, and quality when making purchases.

3. Parasuraman, Zeithaml and Berry (1988)

The SERVQUAL model, created by these three researchers, identified five important aspects of service quality: assurance, tangibles, responsiveness, empathy, and reliability. Despite its development initially for the service industry, what they observed has been commonly used in product marketing. They discovered that the primary source of discontent is the discrepancy between the customer's expectations and the actual delivery. This gap idea can be used to explain why some sugar consumers are unhappy even when the product quality is clearly high.

4. Anderson and Sullivan (1993)

Anderson and Sullivan's work across several product categories revealed a very interesting relationship between repurchase intention and customer satisfaction. Even small increases in customer satisfaction scores translate into notable gains in customer retention rates. Satisfied customers far more inclined to buy again and unhappy customers voice their displeasure

much more loudly than satisfied customers do. So stopping customer dissatisfaction from happening initially is critical.

5. Fornell, C. (1992)

To create what he called the Swedish Customers Satisfaction measure, Fornell carried out extensive research in a variety of industries. In every industry, he discovered that the two best measures of customer's satisfaction are perceived value and product quality. Additionally, he found that firms with more customer's satisfaction ratings generally have a strong long-term financial results. This study backs up the claim that investing in quality improvement for cooperative sugar mills directly results in improved business outcomes.

6. Zeithaml, V.A. (1988)

Zeithaml's studies on how consumers perceive price, quality, and value found that customers do not evaluate these three elements independently. Instead, they make an overall judgment about whether the value they received was worth the price they paid. Her study was found if customers sense they're getting high value meaning good quality at a fair price satisfaction follows naturally. This insight is particularly useful for sugar marketing because price and quality are the two most compared factors in this product category.

7. Hallowell, R. (1996)

Hallowell studied the link between the customer's satisfaction, profitability, and loyalty and outline three elements are strongly connected. The person said that if customer loyalty goes up by five percent the business can make a lot more money. Between 25 percent and 95 percent more profit. This relies on what kind of business its Customer's satisfaction is also a way to make money. Customer's loyalty is quite crucial, for the organization and customers happiness is a part of customer loyalty.

8. Cornin and Taylor

Cronin and Taylor noticed at how glad customers if they want to buy things again. They also noticed how decent the services. They noticed that when customers are happy they like the service. They also discovered that happy customers want to buy things from the place again. So if customers are happy with a brand they will remain customers of brand. Customer's satisfaction and service quality are. Customer's satisfaction and buying things again are connected too.

9. Sivadas and Baker-Prewitt (2000)

The researcher found that satisfaction is essential but not really requirement for the loyalty. Customers need to perceive consistently high quality over multiple purchases before they develop true loyalty. A single satisfying experience may not be enough it is the pattern of satisfaction over time that builds loyalty.

10. Spreng and Mackoy (1996)

Spreng and Mackoy tested a model viewed as a service quality and satisfaction and found that meeting customer expectations is single and most crucial determinant of satisfaction. Understanding the expectations and wants of individuals may be vital. This will let you able to move from customers that are satisfied by your product to those that are actually excited about it. Understanding the gap between the expectations and wants of the consumers is important. This two sides and aspects when it comes to consumers products and expectations.

11. Nair and Sukumaran (2015)

The study has investigated the satisfaction level of customers of sugar in Kerala state the area of research covered in this paper. It was observed by those conducting the research that quality and prices of products are the pair of main determinants of customer's satisfaction drawing on the survey involving 100 consumers across rural and urban areas. The cooperative sugar firms have credibility problem within the marketplace and some cases, the customers perceive the privately branded sugar to be of better despite lack of any grounds for this perception.

12. Sharma and Goyal (2011)

Sharma and Goyal did some research on how people in India buy food products. They discovered that packaging and availability are quite crucial when people weigh their choices about what to buy. If the packaging is bad or he products are isn't available people are more likely to change their choices. This happens even if the price is not that different. So what Sharma and Goyal found out is that food companies need to guarantee their products stay available, to people. They think of getting products to stores as a way to help their customers the food companies need to think about distribution as a way to serve their customers the food products industry need to prioritize on distribution as a customer service activity.

13. Patel and Desai (2017)

This study about customer's satisfaction of Fast Moving Consumer Goods(FMCG) in Gujarat. It found consumers of things like sugar and edible oil again and again they do it because they trust the brand. When people trust a brand they do not easily switch to another brand. So they said that they should focus on making people trust them than trying to be cheaper, than other companies. Fast Moving Consumer Goods(FMCG) companies need to earn the trust of their customers because this is what makes customers buy from them again and again.

14. Reddy and Rao (2014)

The study by Reddy and Rao about sugar products in Andhra Pradesh shows that people in semi-urban areas think the cost of sugar products is quite crucial than the brand or name of the sugar products when they buy sugar products. Reddy and Rao found out that in places where people're careful, about what they spend a difference of just Rs. 2/kg of sugar products is enough for people to switch to a different brand of sugar products. Reddy and Rao also saw that people usually buy sugar products they're able to find in their area instead of traveling to buy the brand of sugar products they like.

15. Kumar and Singh (2016)

Kumar and Singh did a study on how packaging affects what people buy when it comes to food. They located that people feel good when food products have clear packaging. This is showed that when packaging is good people think the products inside are good too even before they open it. People seem to care about packaging that is damaged than if the product inside has a small problem. Kumar and Singhs study says that packaging plays a role, in what people think of food product

16. Mishra and Tripathi (2018)

This study they investigated that how happy people in the countryside're with the agricultural and food products they buy. It found that rural peoples are very attentive about what spend their money on. They will stick with a brand if they really like it. The people doing the study saw that rural consumers trust what their neighbours and local shop owners tell them about brands. When it comes to choosing a brand rural consumers really listen to what these people have to say. This is especially true, in village markets where people do not see a lot of

advertisements. Rural purchasers are more likely to buy something because someone they know told them it is good than because they saw an ad for it.

17. Joshi and Kulkarni (2019)

A study by Joshi and Kulkarni on sugar mills in Maharashtra shows us something interesting about brand loyalty among farming communities. The research showed farmers who sell sugarcane to a mill will often buy sugar products from that same mill. They do this because they think like the mill is theirs not just because the products are cheap or good. The loyalty of farmers to sugar mills is strong and lasts a long time. It is hard for other companies to win over these farmers even if they offer deals or lower prices for sugar products. The brand loyalty of farmers, to sugar mills is very strong

18. Gupta and Verma (2020)

Gupta and Verma studied consumer awareness along with satisfaction within the food industry and found that growing customers awareness about the food safety and quality standards have made customers is more selective in their purchasing choices. Their study revealed customer's are increasingly checking for FSSAI certification, manufacturing dates, and ingredient information on food product packaging. This trend suggests that sugar factories need to ensure their packaging carries clear and accurate information to satisfy the growing demand for transparency.

19. Patil and Hegde (2021)

This piece of research was carried out in North Karnataka including parts of Belagavi district and hence the most directly relevant to the present research. The researchers found that availability and dealer behaviour they that determining the customer satisfaction for sugar products in this region. They found that customers in Belagavi district are largely brand-flexible and will switch to whatever sugar is available at their nearest store. This highlights the critical importance of maintaining a consistent supply chain and strong dealer relationships for Hiranyakeshi sugar.

20. Ramesh and Naik (2022)

This study researched how consumer choices for packaged products shifted after the COVID-19 outbreak. The researchers reported that become significantly more hygiene conscious and now strongly prefer factory sealed packaged sugar over loose sugar sold by weight at local

stores. They also study that customer prefer to pay a small premium for packaged sugar form known brand. This finding presents a clear opportunity for organized cooperative mills like Hiranyakeshi to strengthen their branded packaged product range and target the growing segment of quality-conscious consumers.

RESEARCH GAP

After a detailed review of above literature, it is clear that while customer's satisfaction has studied extensively in the FMCG and food product sectors, there is a major lack of research focused specifically on customer's satisfaction towards sugar products of cooperative mills in the Belagavi district of Karnataka. The food industry is broadly without focusing on sugar as particular product category. Studies that focus on the sugar are mostly from Kerala, Andhra Pradesh, or Maharashtra. There is therefore a clear research gap for understanding satisfaction levels of customers in the North Karnataka region, particularly towards cooperative sugar brands. The current study aims to address this gap by examining customer satisfaction specifically towards the sugar products of Shri Hiranyakeshi Sahkari Sakkare Karkhane Niyamit(SHDDKN), Sankeshwar.

CHAPTER 3

RESEARCH DESIGN

3.1 STATEMENT OF THE PROBLEMS

Sugar is one of key commodities used by every household in India on a daily basis. With increasing the competition from different sugar brands in the market, cooperative sugar mills need to determine how much satisfied their customers are in order to retain them and stay competitive.

Shri Hiranyakeshi Sahkari Sakkare Karkhane Niyamit(SHDDKN), Sankeshwar. The company has been. Selling a sugar in Maharashtra and Karnataka for more than 60 years. They have going this out for a long time. The companies yet to do any research to find out that if the people who buy their sugar are happy with it. They're wish to finding out what the people think about the sugar they make. The company is still working to determine how satisfied their customers are, with the sugar they buy from them.

In this Modern days, before buying a product, consumers naturally weigh a few key things how easily it available, how it package, its quality, and of cours, the price. And if any of this fall short of what they expect, they won't think twice about switching to another brand. That's exactly why it becomes so important for the plant to spot.

This study is going how satisfied customer's products made by Hiranyakeshi Sugar Factory. It will also look at what things make customers happy or unhappy with these products. Sometimes customers have problems when they buy something. The study wants to know what these problems are. The people in charge at Hiranyakeshi Sugar Factory can use this information to make decisions about what to do next, with the products made by Hiranyakeshi Sugar Factory.

3.2 NEEDS FOR THE STUDY

- No previous formal research has conducted on customers satisfaction towards sugar products of Shri Hiranyakeshi Sahakari Sakare Karkhane Niyamit(SHDDKN), Sankeshwar.
- Customer expectations have changed in the last few years customers now demand accurate weight, proper packaging, clear labelling, and consistent quality, and the factory needs to know whether it is meeting these expectations.
- As the factory expands its crushing, distillery, and ethanol operations, maintaining strong customer satisfaction in the core sugar business turns especially critical for financial stability.

- Hiranyakeshi is a farmer owned cooperative when the factory performs well commercially, farmers receive better cane prices and the rural community benefits directly, making customers satisfaction a issue of community welfare.
- The study provides reliable primary data that supports evidence-based decision making by the factory's on matters of quality, pricing, packaging, and distribution.

3.3 OBJECTIVE OF THE STUDY

Primary objective

study the range of satisfaction on sugar products of Shri Hiranyakeshi Sahakari Sakkare Karkhane Niyamit(SHDDKN), Sankeshwar.

Secondary Objectives:

- To determine the demographic profile of customers such as gender, age, occupation, income, and educational qualification who purchase Hiranyakeshi sugar products.
- To study how customers behave when it comes to frequency of purchase, quantity purchased, and preferred place of purchase of sugar products.
- To analyse the customers satisfaction with regard to products qualities, prices, packaging, availability, and quantity accuracy of Hiranyakeshi sugar products.
- To identify the key factor that affect customer's satisfaction towards sugar products of the factory.

3.4 SCOPE OF THE STUDY

- **Geographical Scope** – The study covered customer's from Sankeshwar, Hukkeri Taluk, and nearby areas of Belagavi district, Karnataka.
- **Product Scope** - The study covers only sugar products of Shri Hiranyakeshi Sahakari Sakkare Karkane Niyamit(SHDDKN), Sankeshwar. Other by-products like ethanol and power are not included.
- **Respondent Scope** - The study has based responses from 100 respondents including households, retailers, and dealers who purchase Hiranyakeshi sugar products.
- **Subject Scope** – The study was analysing the customers satisfaction with regard to product's quality, price, package, availability, quantity accuracy, and dealer behaviour.

- **Time Scope** - The data collection took place during the internship period of the researcher at the factory and reflects customer's satisfaction point in time.

3.5 RESEARCH METHODOLOGY

Introduction Paragraph:

A researcher's methodical approach to gathering, analysing, and interpreting data in order to accomplish the study's goals is referred to as research methodology. offers detailed overview of the techniques employed at each phase. The current study is customer satisfaction with sugar products from Shri Hiranyakeshi Sahkari Sakkare Karkhane Niyamit (SHDDKN), Sankeshwar, used the following research methodology.

a) Type of Research

This study follows descriptive in the nature. Descriptive research is used when the researcher wants to describe the characteristics, opinions, and behaviour of the specific group or population. Since this study was aims to describe and analyse the satisfaction of customers towards sugar products, descriptive research design is the most suitable approach.

b) Sources of Data

The study uses primary and secondary data

- **Primary data**
  Primary data is data that is collected fresh and directly from sources. In the study, data collected from customers, retailers, and dealers through a structured questionnaire. This is most important source of data for this study as it provides first-hand information about customer satisfaction levels.
- **Secondary data**
  Secondary data is data that has been put together and published by others. In this secondary data was gathered from following sources
    - Published books on marketing and consumer behaviour
    - Research journals and academic papers
    - Government publications related to sugar industry
    - Websites and online databases

c) Population

The population of study consists of all customers who purchase sugar products of Shri Hiranyakeshi Sahkari Sakkare Karkhane Niyamit(SHDDKN), Sankeshwar in and around Belagavi district. Since the exact number of customers is not known, the population is considered to be infinite purpose of study.

d) Sample Size

Sample of 100 respondents are chosen for study. These respondents include households, retailers, and dealers who regularly purchase or sell Hiranyakeshi sugar products in and around Sankeshwar and Belagavi district.

e)Sampling Method

Convenience Sampling Method used for study. Under the method respondents were selected based on easy availability and interest to participate in survey. This method chosen because it is practical, time-saving, and suitable given the time constraints of the internship period during which the data was collected.

f) Data Collection Tool

A structured questionnaire designed and used the primary instrument for the data collection. The questionnaire prepared keeping in mind the objective of study and key factor influence the customer satisfaction.

3.7 LIMITATION OF THE STUDY

- Only 100 respondents were covered in this study, so it may not represent the factory's entire customer base.
- The study has been limited to Sankeshwar and nearby parts of Belagavi district, so the results can't be applied to other regions where Hiranyakeshi sugar is sold.
- Since the data was customers reported them, a chance of bias or errors due to memory.
- Convenience sampling was used in this study, so the sample may not represent the population accurately.
- This study only looked at sugar products, and other by-products like ethanol or power produced by the factory were not included.

3.8 CHAPTER SCHEME

Chapter	Title	Brief summery
Chapter 1	Introduction	This chapter covers the industry profile, company profile, area of operation, products and service, infrastructure facilities, S.W.O.T analysis, future growths and prospects, and financial statements of Shri Hiranyakeshi Sahkari Sakkare Karkhane Niyamit(SHDDKN), Sankeshwar
Chapter 2	Conceptual Background and Literature Review	This chapter presents the theoretical backgrounds of customer satisfaction, key concepts, models, and reviews of 20 research studies related to topic. It also identifies the research gap that study was aims to address
Chapter 3	Research Design	This chapter has objectives, scope, research methodology, limitations, and chapter scheme of study
Chapter 4	Analysis and Interpretation	This chapter has presents analysis and the interpretation of primary data collected through questionnaire. Tables, graphs, and statistical tools used to present the findings clearly.
Chapter 5	Findings, Conclusion and Suggestions	This chapter has presents the main findings of study, draws conclusions based on analysis, and offers practical suggestions and recommendations to the factory management.

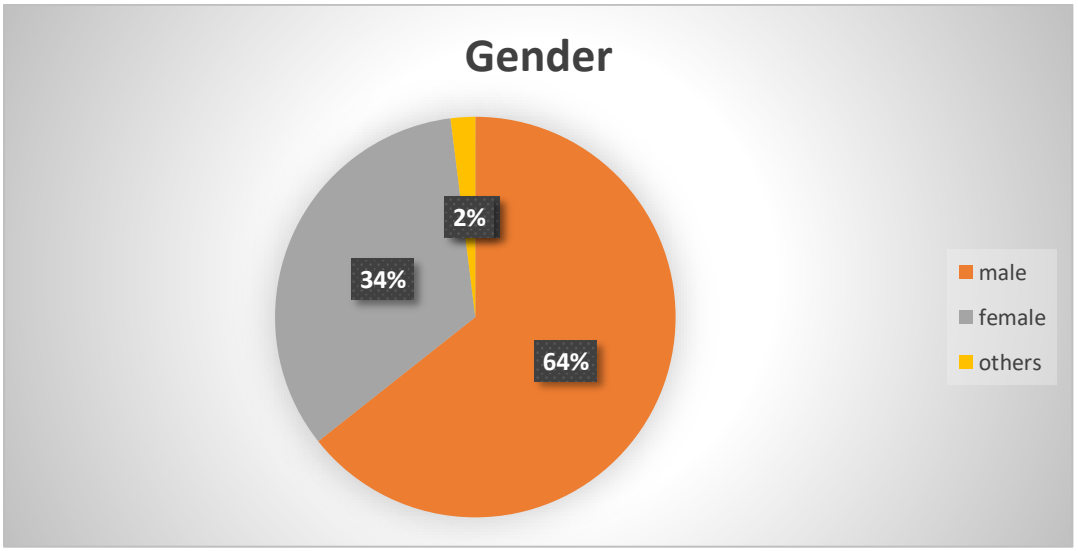

CHAPTER 04

DATA ANALYSIS AND INTREPRETATION

4. Analysis and Interpretation

4.1 Gender-wise Distribution of Respondents

Particular	No. of Respondents	Percentage
Male	65	64.4%
Female	34	33.7%
Other	2	2%

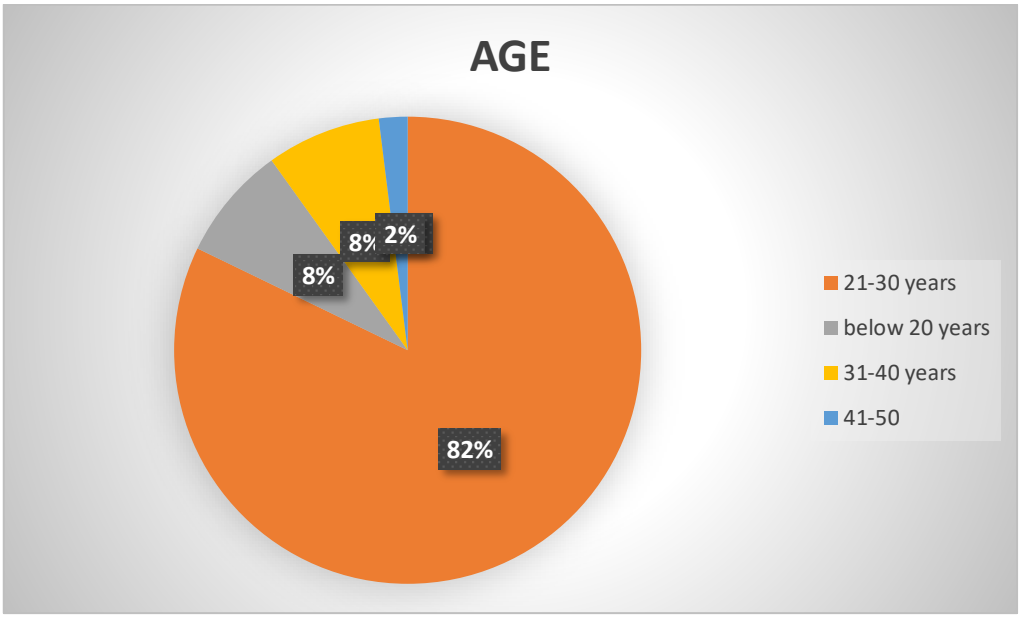

Interpretation

- The survey results is indicate that out of 101 respondents, 65 respondents (63.7%) were male, 34 respondents (33.3%) were female, and 2 respondents (2.0%) identified as other.
- It's clear from this that male respondents are represented the majority.
- However, the participation of female respondents also provides a balanced perspective on customer satisfaction towards Hiranyakeshi sugar products.

4.2 Age-wise Distribution of Respondents

Particular	No. of Respondents	Percentage
Below 20 years	8	7.9%
21- 30 years	83	82.2%
31-40 years	8	7.9%
41-50 years	2	2%
More then 50	-	-

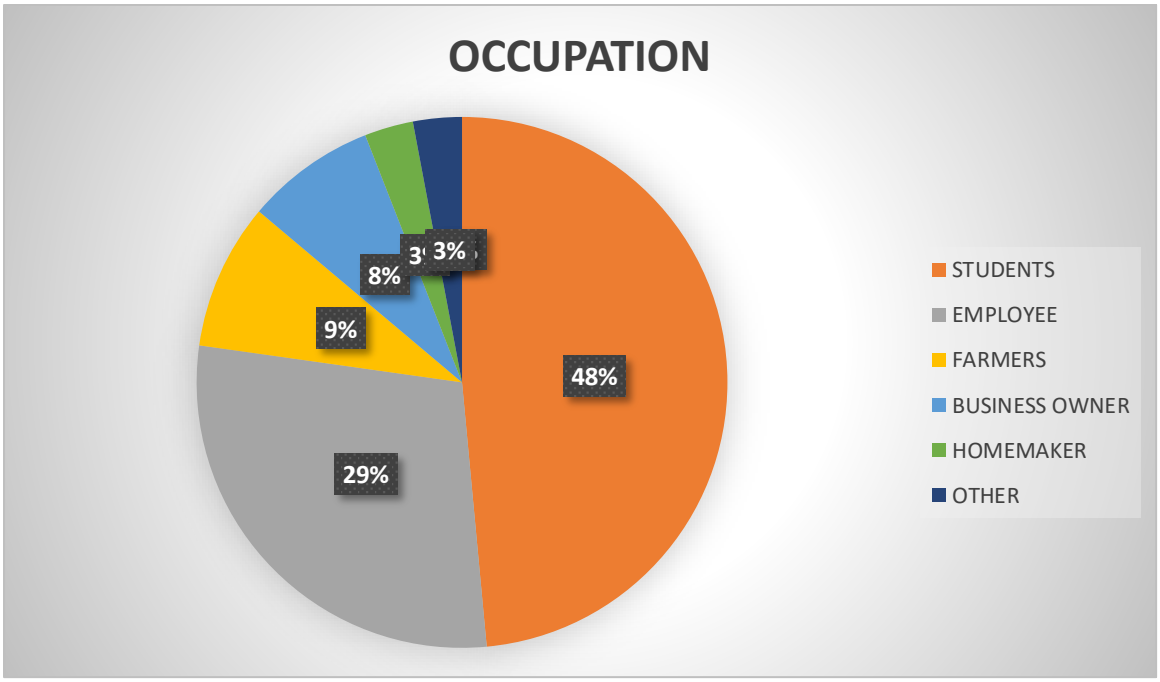

Interpretation

- The age-wise data reveals that 83 respondents (81.4%) belong to the 21–30 years age group, making it the largest category in the survey.
- Eight respondents (7.8%) were below 20 years, while another eight respondents (7.8%) were between 31–40 years.
- Only two respondents (2.0%) belonged to the 41–50 years age group

4.3 Occupation-wise Distribution of Respondents

Particular	No. of Respondents	Percentage
Student	49	48.5%
Employee	29	28.7%
Business	8	7.9%
Homemaker	3	3%
Farmer	9	8.9%
Other	3	3%

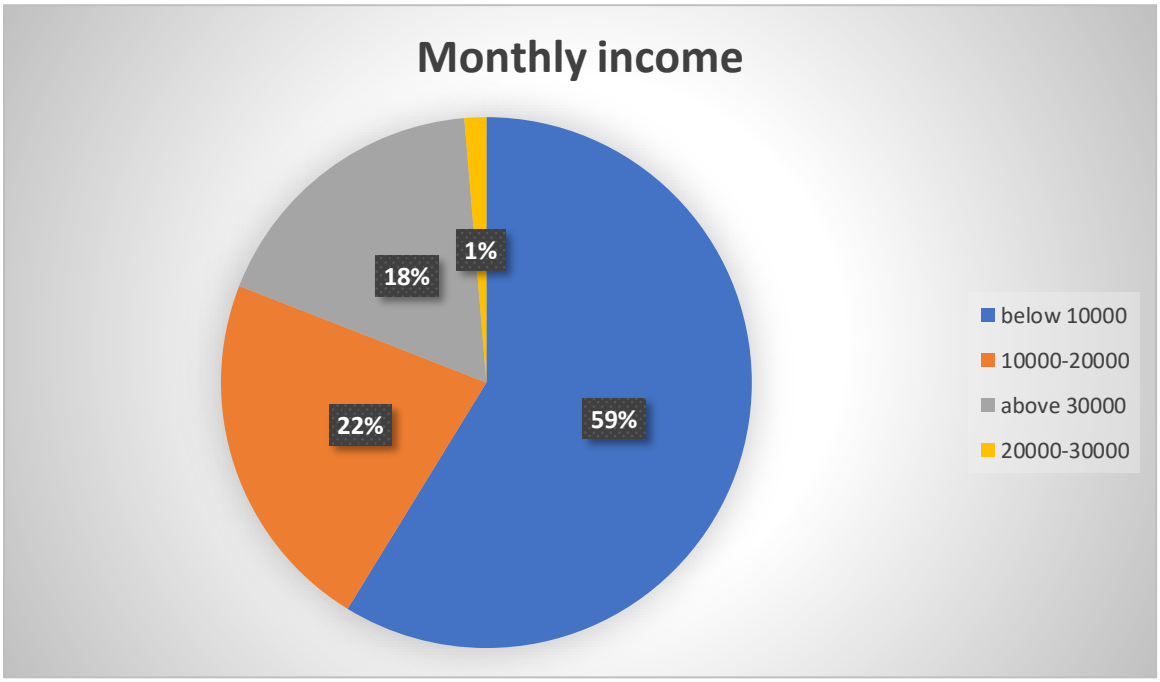

Interpretation

- The participation of respondents from different occupations provides a wider understanding of customer preferences and satisfaction levels, as sugar is a commonly used household product across all sections of society.

4.4 Monthly Income of Respondents

Particular	No. of Respondents	Percentage
Below ₹10000	53	52.5%
₹10001 - ₹20000	20	19.8%
₹20001 - ₹30000	12	11.9%
Above ₹30000	16	15.8%

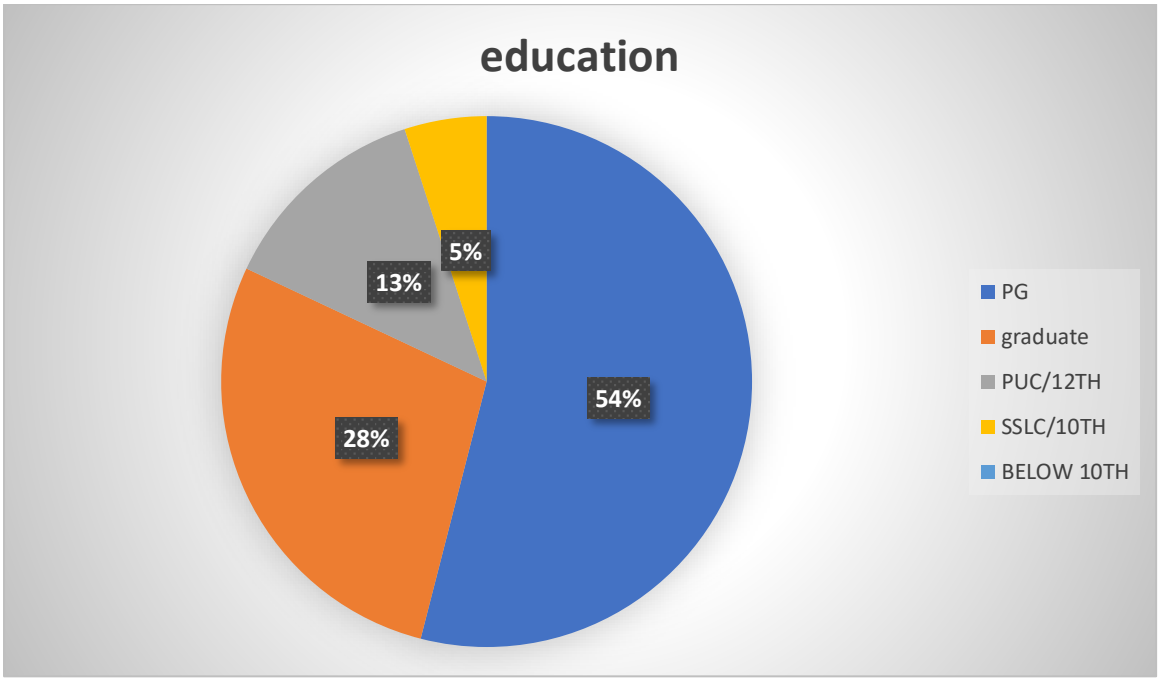

Interpretation

- The income-wise distribution shows that 53 respondents (52.0%) have a monthly income below ₹10,000, making it the largest income group in the survey.
- Twenty respondents (19.6%) earn between ₹10,001 and ₹20,000; 12 respondents (11.8%) belong to the ₹20,001–₹30,000 category, while 16 respondents (15.7%) have a monthly income above ₹30,000.
- This points to that affordability remains an crucial factor in purchasing decisions.

4.5 Educational Qualification of Respondents

Particular	No. of Respondents	Percentage
Below 10th	1	1%
SSLC / 10th	5	5%
PUC / 12th	13	12.9%
Graduate	28	27.7%
Post Graduate	54	53.5%

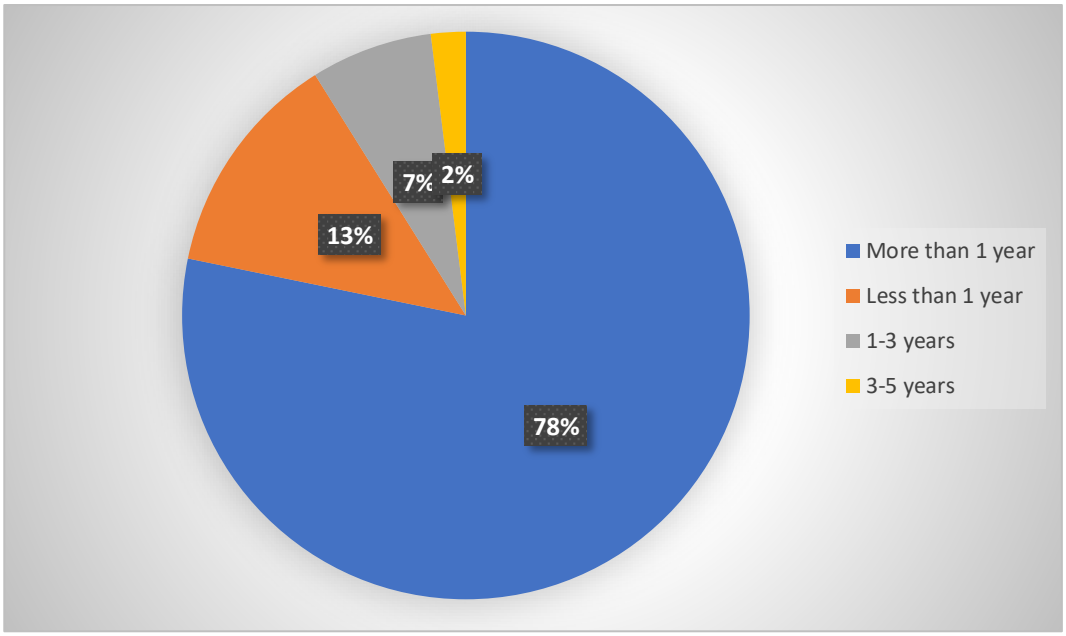

Interpretation

- The high number of graduate and postgraduate respondents indicates that majority of participants are well educated and capable of providing thoughtful opinions regarding the quality, pricing, packaging and overall satisfaction with Hiranyakeshi sugar products.

4.6 Duration of Using Sugar Products

Question: how long you've been using sugar products?

Particular	No. of Respondents	Percentage
Less than 1 years	13	12.9%
1 - 3 years	7	6.9%
3 - 5 years	2	2%
More than 5 years	79	78.2%

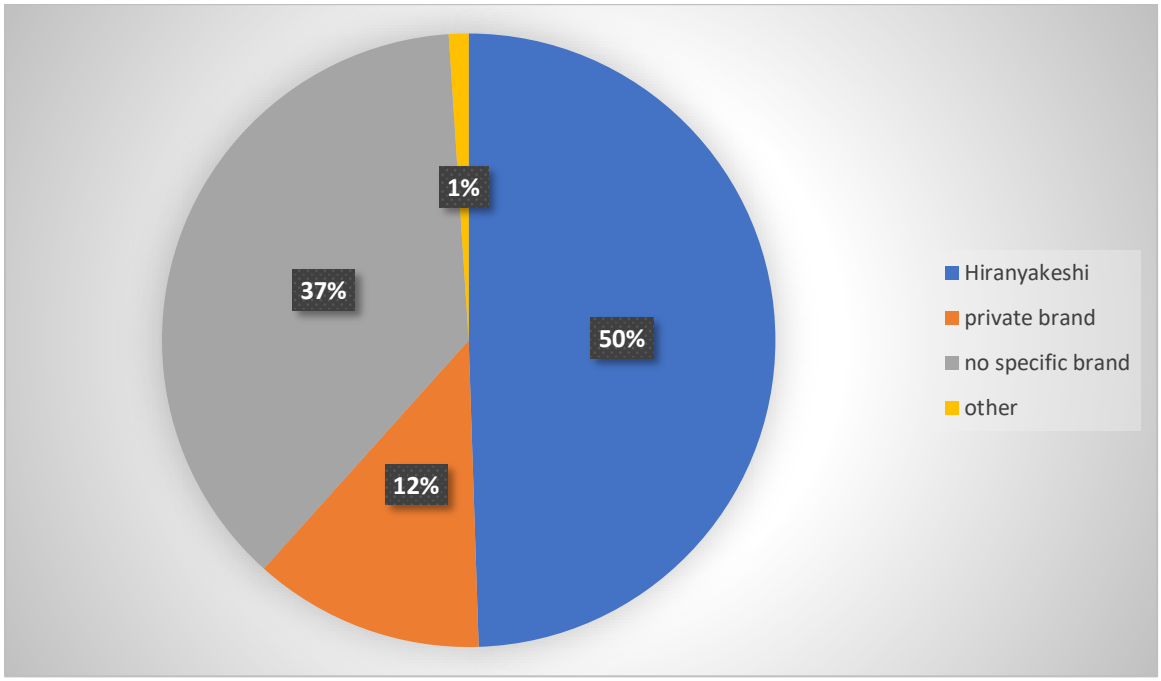

Interpretation

- The result reveal that the most of those surveyed have enough experience to provide reliable opinions regarding the quality and performance of Hiranyakeshi sugar products.

4.7 Brand of Sugar Mostly Purchased

Question: which brand of sugar do you mostly purchase?

Particular	No. of Respondents	Percentage
Hiranyakeshi Sugar	36	35.6%
Other Cooperative Sugar	8	7.9%
Private Brand Sugar	14	13.9%
No Specific Brand	43	42.6%

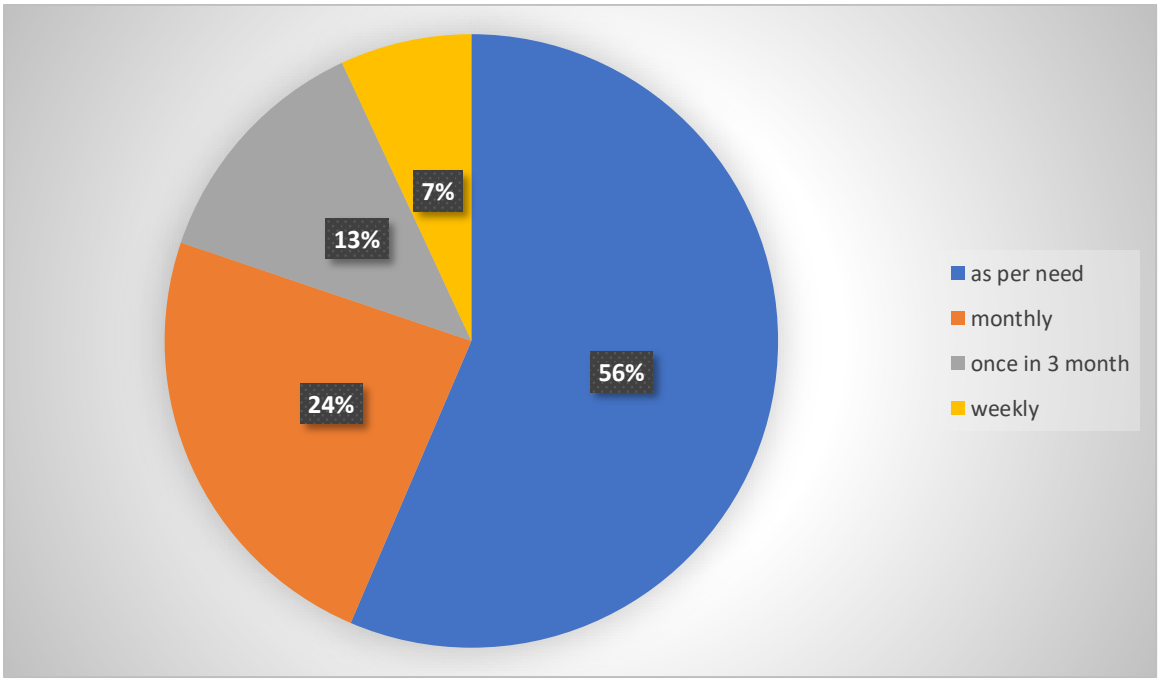

Interpretation

- The findings indicate that although Hiranyakeshi Sugar has a good customer base, a considerable number of consumers are ready to purchase any available brand. This highlights the value of maintaining consistent product quality, competitive pricing and wider market availability to strengthen customer loyalty.

4.8 Frequency of Purchasing Sugar

Question: how frequently so you buy sugar?

Particular	No. of Respondents	Percentage
Weekly	7	6.9%
Monthly	24	23.8%
Once in 3 months	13	12.9%
As per need	57	56.4%

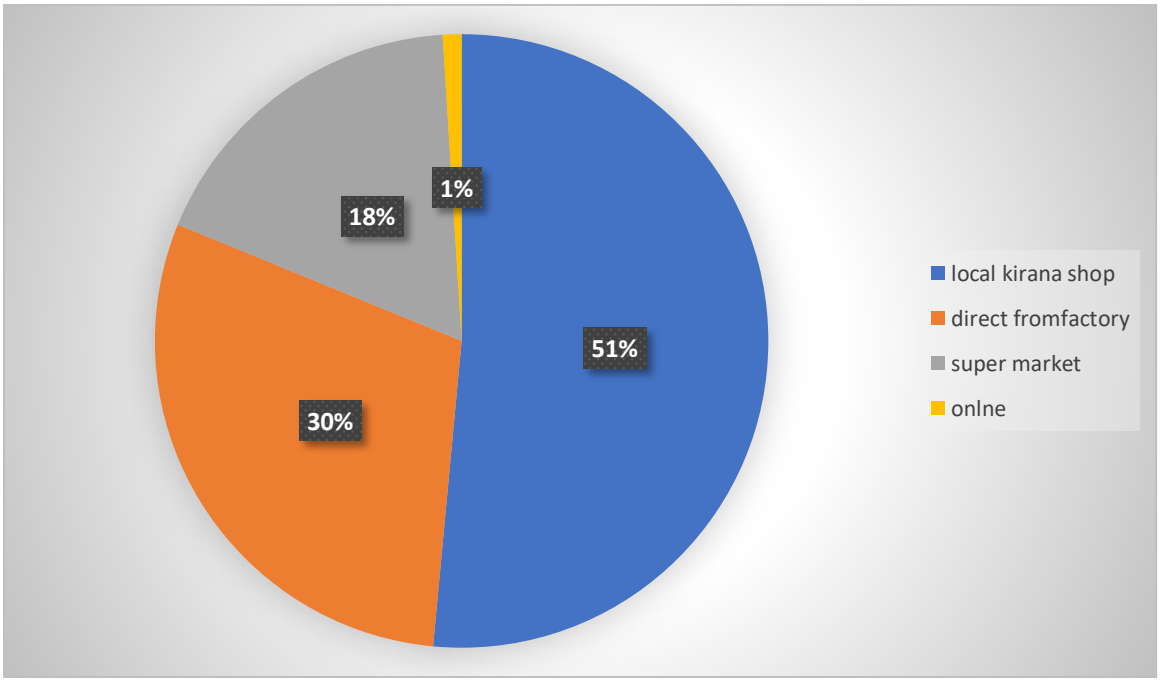

Interpretation

- These result reveal that sugar is generally purchased according to household consumption rather than on a fixed schedule. Therefore, maintaining regular product availability in retail outlets is essential for ensuring customer satisfaction.

4.9 Place of Purchase

Question: where do you usually purchase sugar products?

Particular	No. of Respondents	Percentage
Local Kirana Store	52	51.5%
Supermarket / Mall	18	17.8%
Direct from Factory	30	29.7%
Online	1	1%

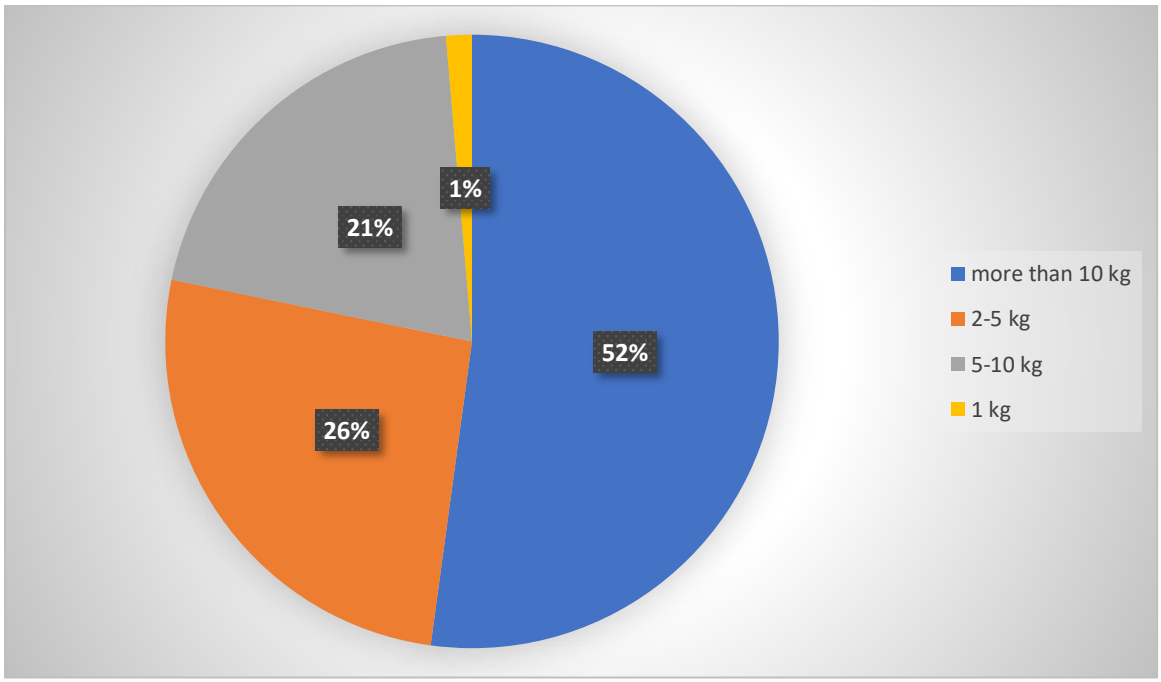

Interpretation

- The result reveal that traditional retail outlets continue to primary source of sugar purchases. Hence, maintaining a strong distribution network through local retailers and dealers is a key factor in improving customer satisfaction and product accessibility.

4.10 Quantity of Sugar Purchased at a Time

Question: what quantity of sugar do you buy at a time?

Particular	No. of Respondents	Percentage
1 Kg	14	13.9%
2 - 5 kg	23	22.8%
5 - 10 Kg	18	17.8%
More than 10 kg	46	45.5%

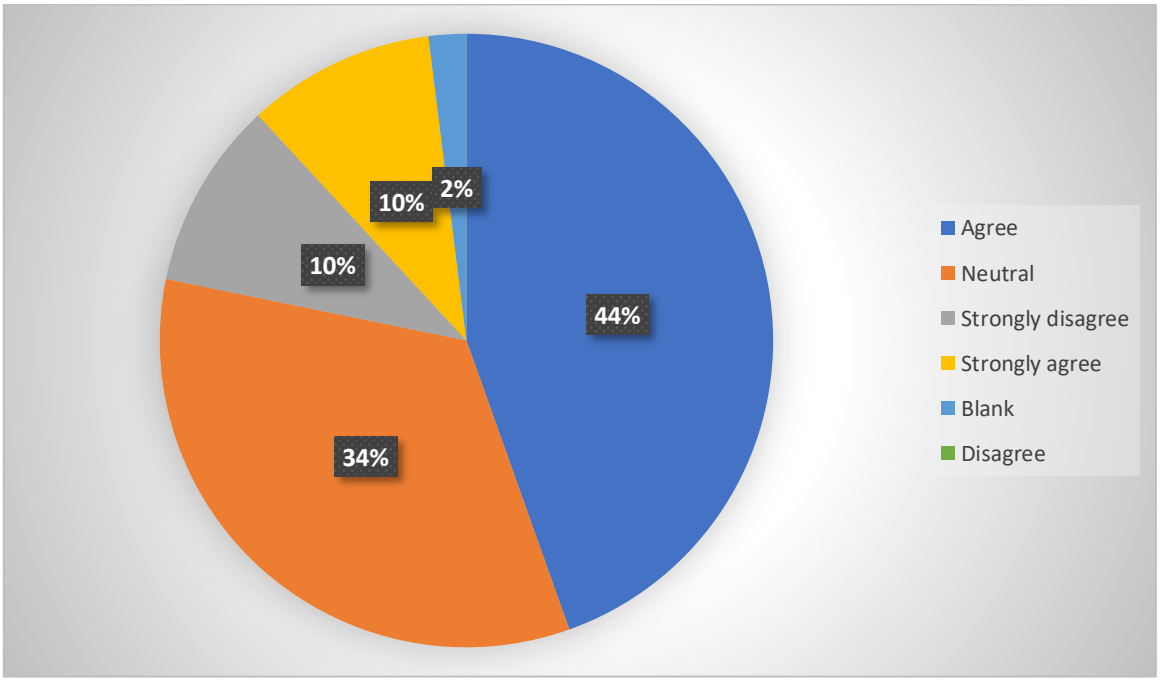

Interpretation

- These results reveals that a large proportion of customers prefer bulk purchases, likely because larger family requirements or to reduce the frequency of purchases. This indicates a demand for larger and economically priced packaging options.

4.11 Sugar Product Quality and Customer Satisfaction

Question: The Quality of sugar products?

Particular	No. of Respondents	Percentage
Strongly Disagree	10	10%
Disagree	1	1%
Neutral	34	34%
Agree	45	45%
Strongly agree	10	10%

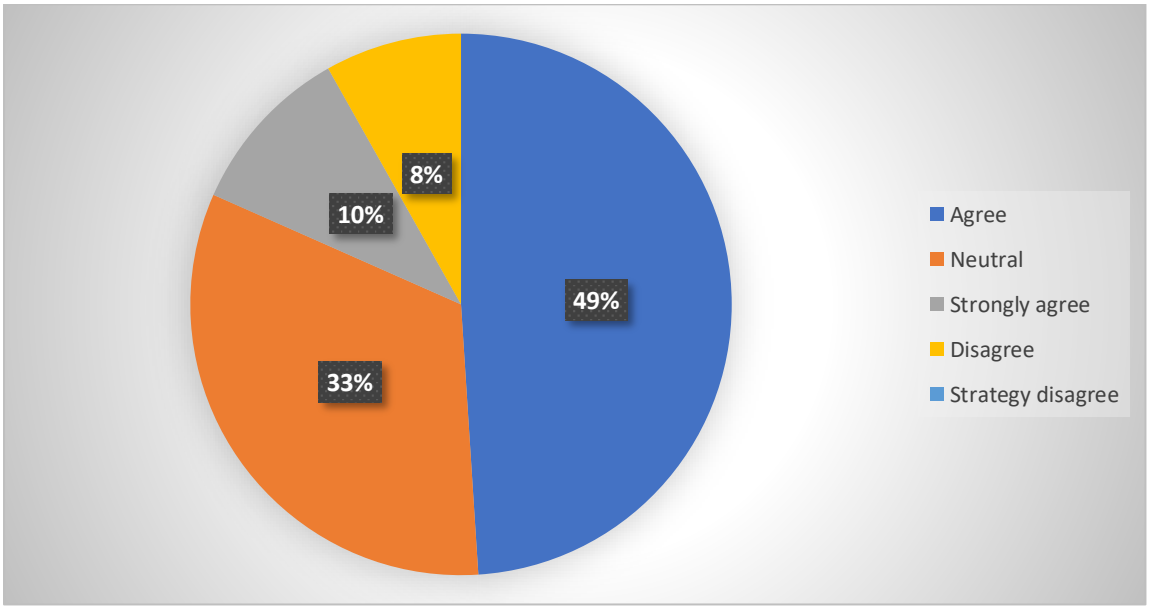

Interpretation

- Overall, a majority of respondents expressed a positive opinion regarding the quality of the sugar products. This revels that the factory has been able to satisfy the quality expectations of many customers, although the responses revel that there i scope to improve consistency so that more customers develop greater confidence in the product.

4.12 Satisfaction with the Price of Sugar Products

Question: the price of sugar products is reasonable?

Particular	No. of Respondents	Percentage
Strongly disagree	2	2%
Disagree	8	8%
Neutral	32	32%
Agree	48	48%
Strongly agree	10	10%

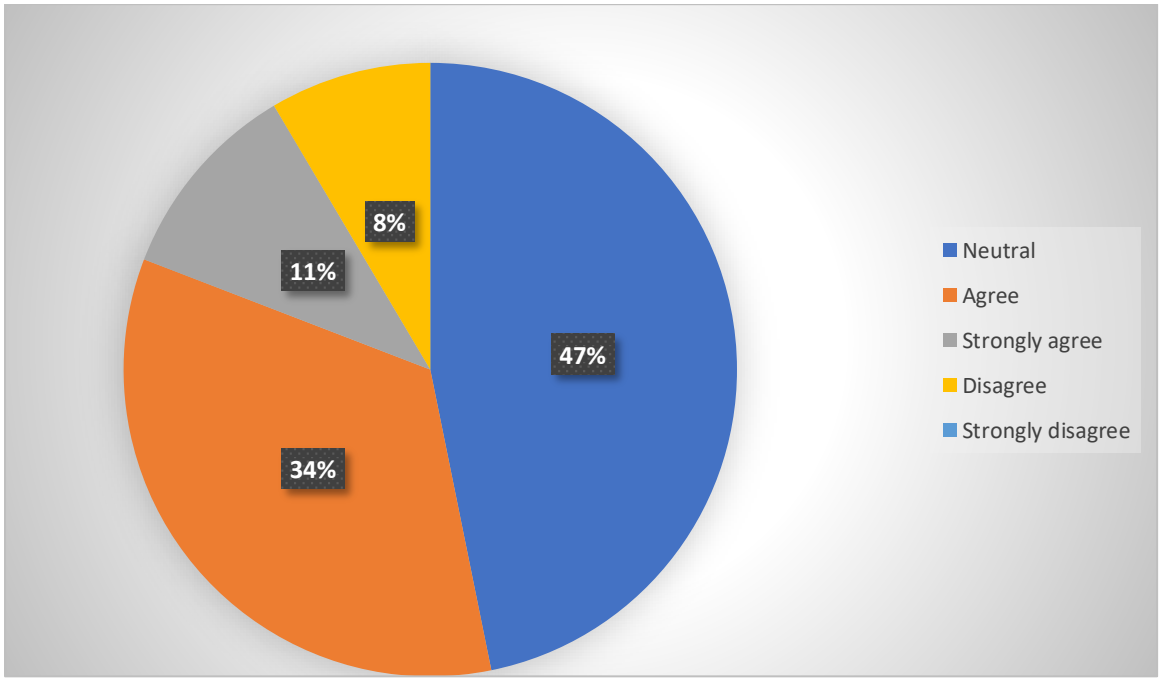

Interpretation

- The result reveals the majority of customers consider the price to be fair when compared with the quality offered. However, the neutral and unfavourable responses reveal that some customers remain price-conscious and compare the product with competing brands available in the market.

4.13 Satisfaction with Packaging

Question: the packaging of sugar products is attractive and proper?

Particular	No. of Respondents	Percentage
Strongly disagree	4	4%
Disagree	9	8.9%
Neutral	44	47%
Agree	35	34.7%
Strongly agree	9	8.9%

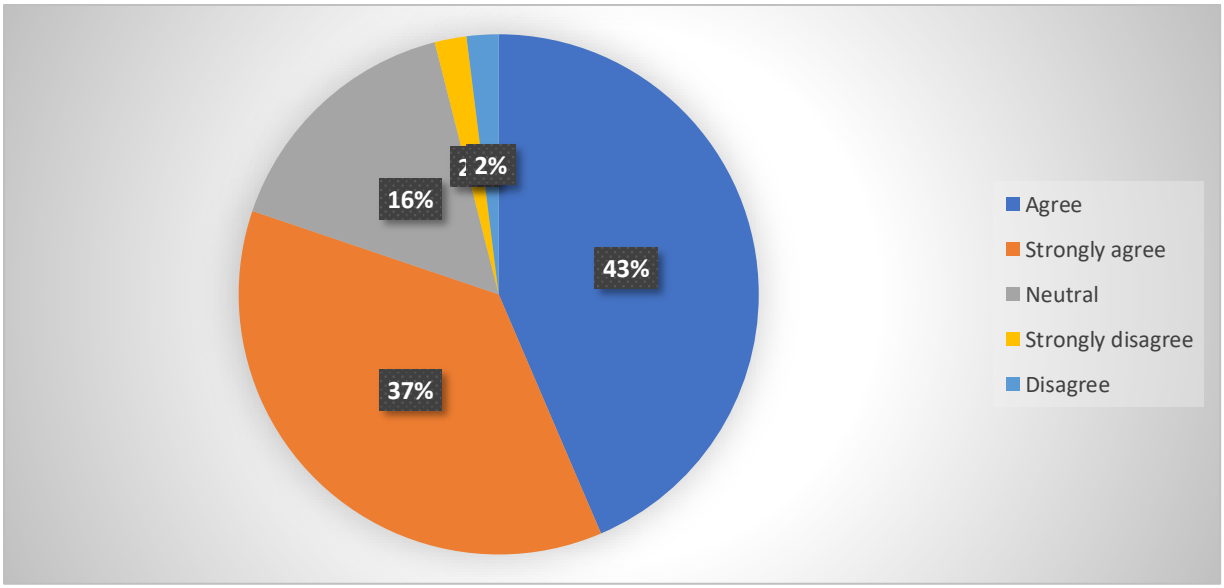

Interpretation

- The large number of neutral responses highlights that although customers don't have major complaints about the packaging, many also do not consider it to be a strong feature of the product. Improving the appearance and durability of the packaging could help strengthen the product's appeal and create a better impression among consumers.

4.14 Availability of Sugar Products

Sugar products are easily available i the nearby store?

Particular	No. of Respondents	Percentage
Strongly disagree.	2	2%
Disagree.	2	2%
Neutral	16	15.8%
Agree.	44	43.6%
Strongly agree.	37	36.6%

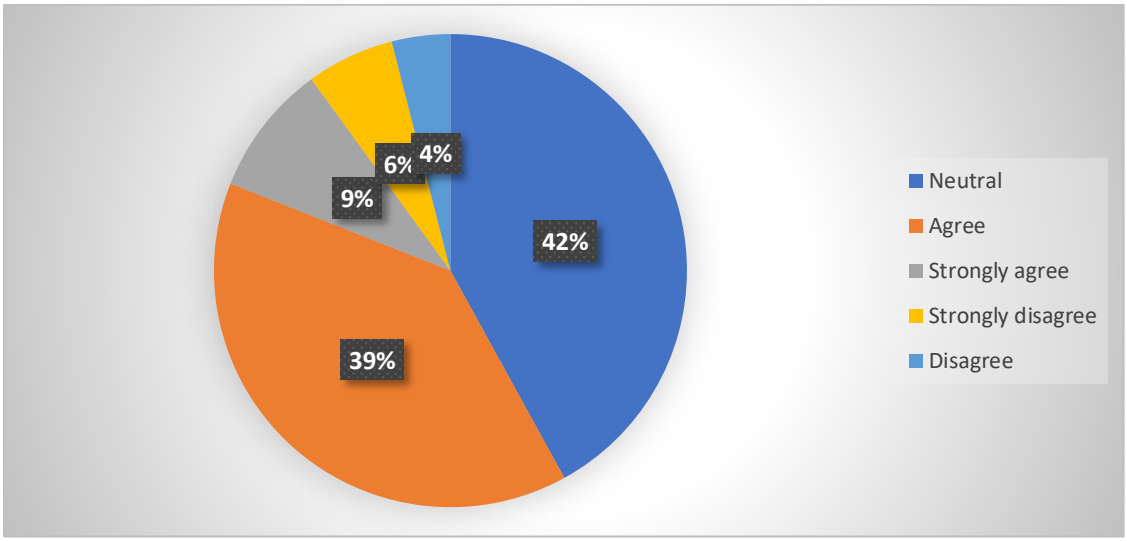

Interpretation

- The survey indicates that 44 respondents (44%) agreed and 37 respondents (37%) strongly agreed that Hiranyakeshi sugar products are easily available in nearby stores. Sixteen respondents (16%) gave a neutral opinion, while only 4 respondents (4%) expressed dissatisfaction.
- This reveal that most of the customers pleased with a supply of the product. A strong distribution network appears to have made the product easily accessible, which contributes positively to customer satisfaction and repeat purchases.

4.15 Amount of Quantity is Mentioned on the Pack

Question: the quantity mentioned on the pack matches the actual quantity received?

Particular	No. of Respondents	Percentage
Strongly disagree	6	6%
Disagree	4	4%
Neutral	42	42%
Agree	39	39%
Strongly agree	9	9%

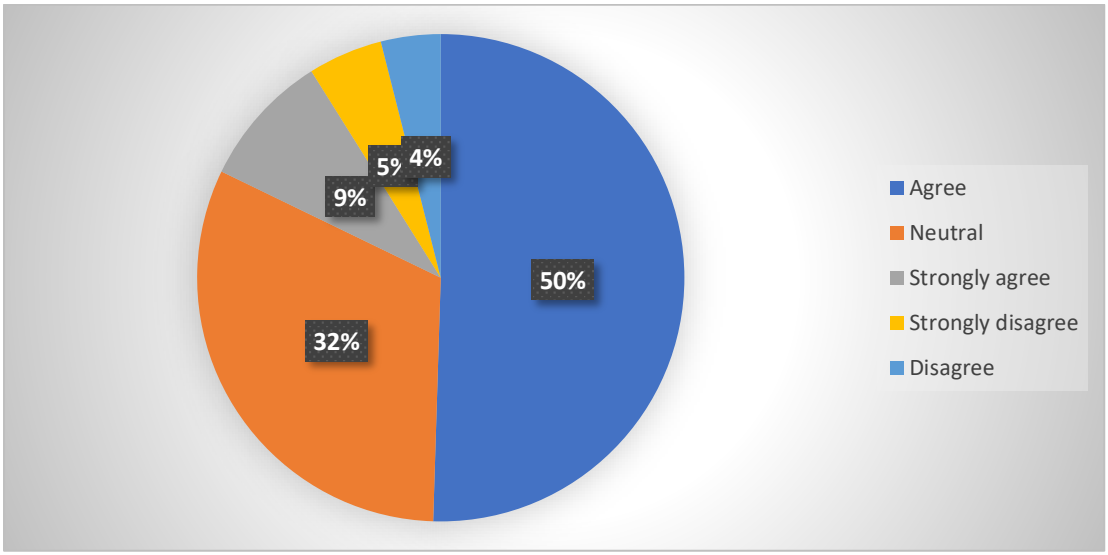

Interpretation:

- He result reveals that most customers have confidence in the accuracy of the product weight.
- However, the large percentage of neutral responses reveal that several customers do not regularly verify the quantity, making it important for the factory to continue maintaining accurate packaging standards.

4.16 Colour and Texture of the Sugar

Question: the colour and texture of the sugar is satisfactory

Particular	No. of Respondents	Percentage
Strongly disagree	5	5%
Disagree	4	4%
Neutral	32	32%
Agree	51	50%
Strongly agree	9	4%

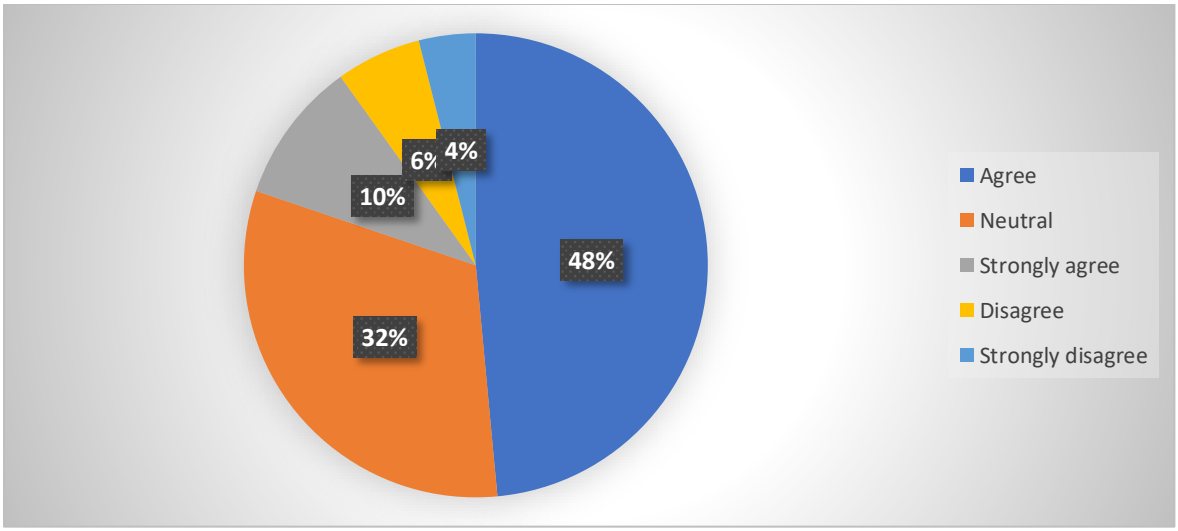

Interpretation

- The survey results presents that 51 respondents (51%) agreed and 9 respondents (9%) strongly agreed that the colour and texture of Hiranyakeshi sugar are satisfactory.
- Thirty-two respondents (32%) gave neutral responses, while 9 respondents (9%) expressed dissatisfaction.
- This outcome reveals that customers generally have a favourable opinion regarding the physical appearance of the sugar.
- The positive response reflects the factory's efforts to maintain product quality, although continuous monitoring is necessary to satisfy all customers

4.17 Satisfaction with Taste and Purity

Question: I'm satisfied with the overall taste and purity of the sugar?

Particular	No. of Respondents	Percentage
Strongly disagree	4	4%
Disagree	6	5.9%
Neutral	32	31.7%
Agree	49	48.5%
Strongly agree	10	9.9%

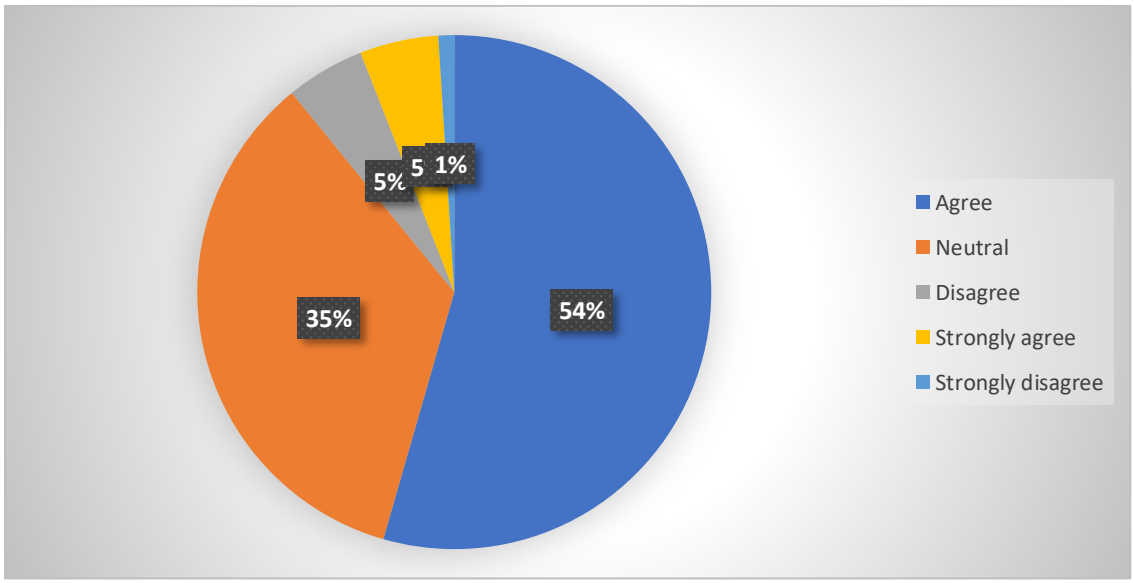

Interpretation

- The results reveal that the customers trust the taste and purity of the product. Since taste and purity are among the key factors are effecting customer satisfaction, maintaining consistent production standards will help strengthen customer confidence further.

4.18 Satisfaction with Shelf Life

Question: the shelf life of the sugar products is adequate?

Particular	No. of Respondents	Percentage
Strongly disagree	1	1%
Disagree	5	5%
Neutral	35	34.7%
Agree	55	54.5%
Strongly agree	5	5%

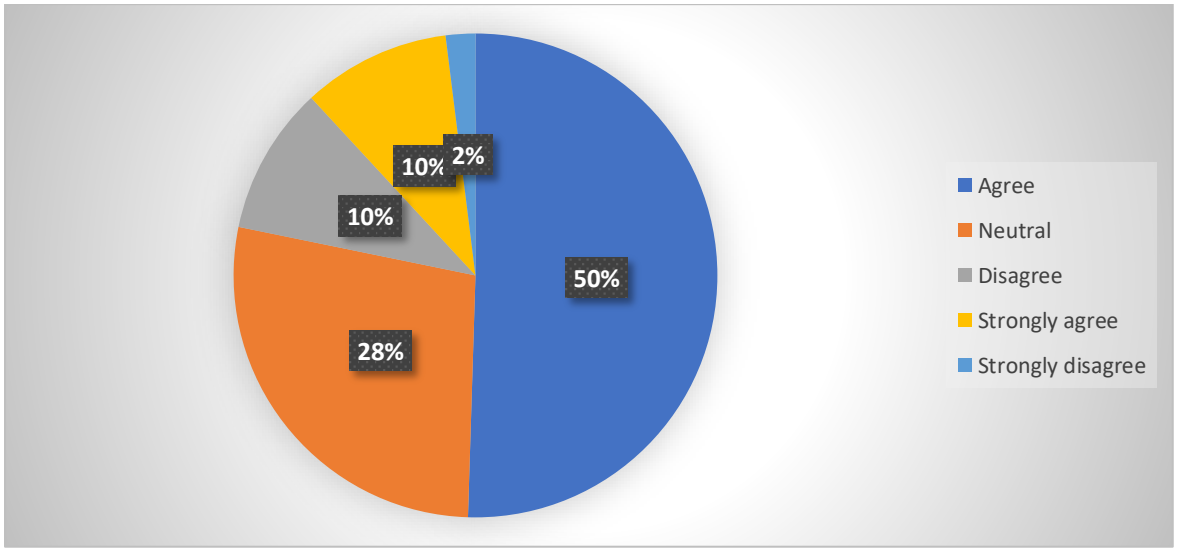

Interpretation

- The result reveals that 55 respondents (55%) agreed and 5 respondents (5%) strongly agreed that the shelf life of Hiranyakeshi sugar products is adequate.
- Thirty-five respondents (35%) gave neutral responses, while only 6 respondents (6%) expressed dissatisfaction.
- This shows that respondents are satisfied with the storage quality and durability of the product. Proper packaging and storage practices appear to have contributed to this positive opinion

4.19 Recommendation to Others

Question:I would rcommend this sugar product to others?

Particular	No. of Respondents	Percentage
Strongly disagree	1	1%
Disagree	10	9.9%
Neutral	28	27.7%
Agree	51	50.5%
Strongly agree	10	9.9%

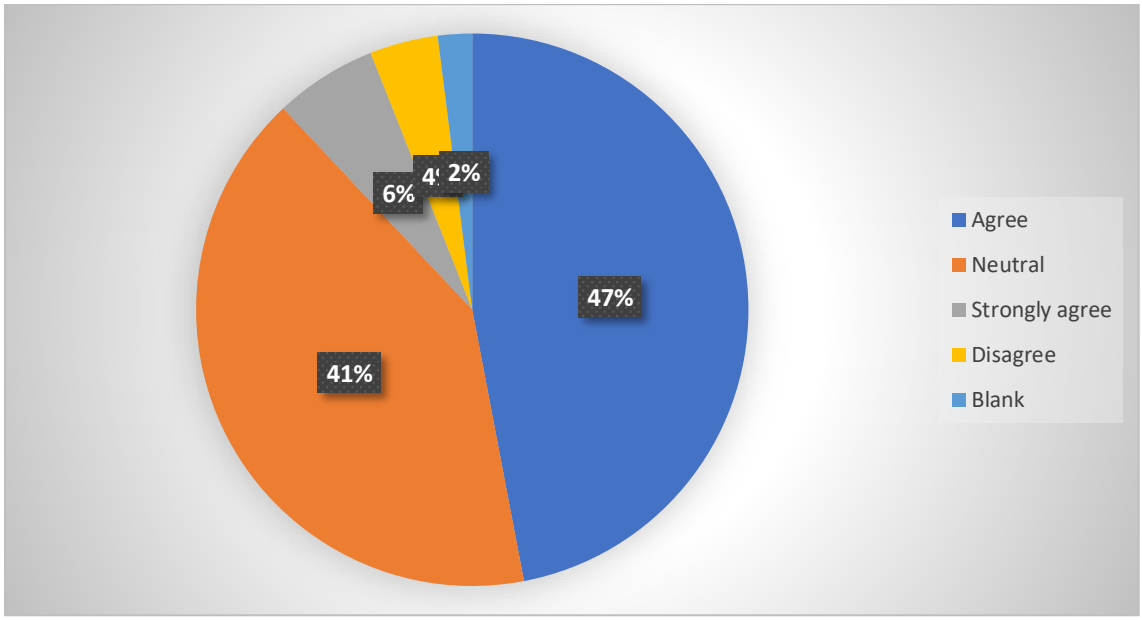

Interpretation

- The preference shown by most of the customers to recommend the product indicates a satisfactory level of customer confidence.
- Positive inputs from existing customers can help the factory strengthen its reputation and attract new consumers through word-of-mouth communication.

4.20 Satisfaction with Dealer Behaviour and After-Sales Service

Question: I am satisfied with the after sales service and dealer behaviour?

Particular	No. of Respondents	Percentage
Strongly disagree	2	2%
Disagree	4	4%
Neutral	41	41%
Agree	47	47%
Strongly agree	6	6%

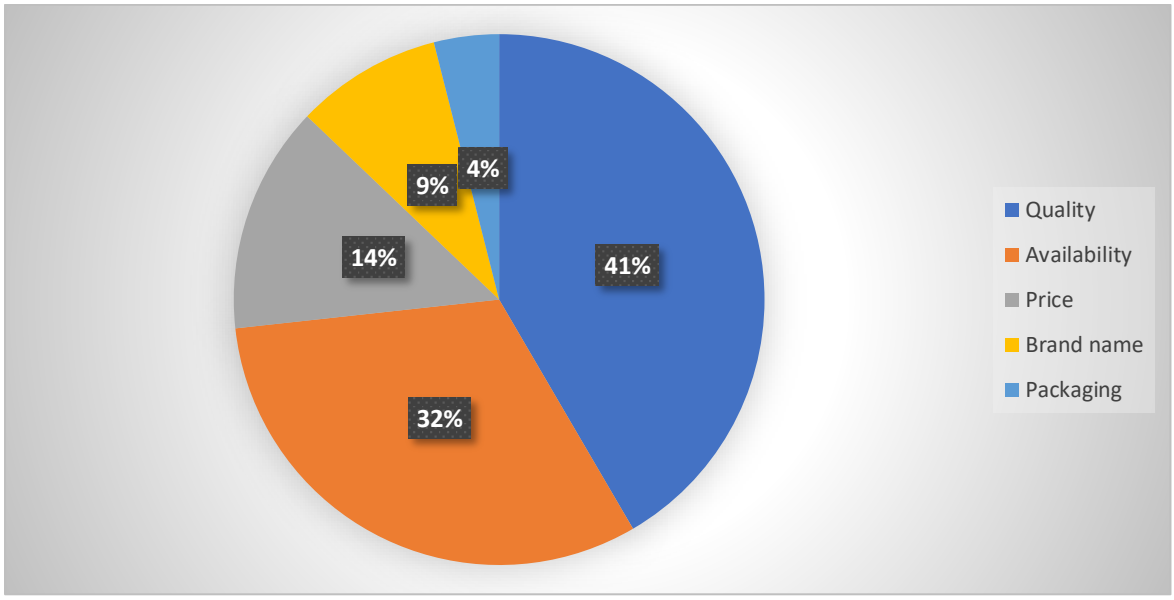

Interpretation

- These results reveal that customers generally have a positive experience while purchasing Hiranyakeshi sugar products. However, the large number of neutral responses reveals that dealers and distributors have an opportunity to improve customer interaction and service quality to enhance overall customer satisfaction.

4.21 Factor Influencing the Purchase of Sugar Products

Question: what factors influences you the most while purchasing sugar?

Particular	No. of Respondents	Percentage
Price	14	13.9%
Quality	42	41.6%
Brand name	9	8.9%
Availability	32	31.7%
Packaging	4	4%

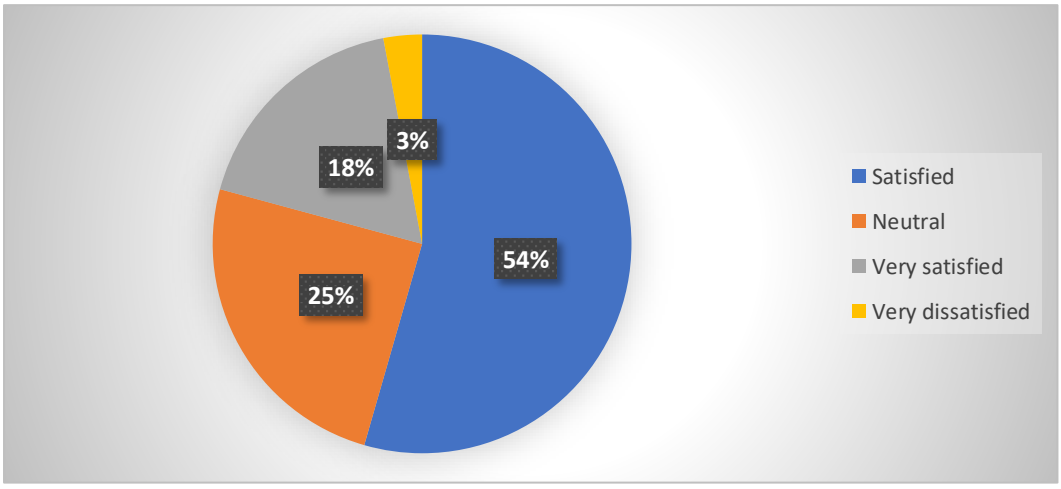

Interpretation

- The data reveal the customers are conscious of price, are not willing to compromise on product quality. For a daily-use product like sugar, maintaining consistent quality and offering it at a reasonable price plays an key role in attracting and retaining customers.
- Therefore, Shri Hiranyakeshi Sahkari Sakkare Karkhane Niyamit(SHDDKN), Sankeshwar, should be continue to concentrate on their product and quality while ensuring reasonable pricing and easy market availability.

4.22 Overall Customer Satisfaction Towards Hiranyakeshi Sugar Products

Question: overall how satisfies are you with Hiranyakeshi sugar products?

Particular	No. of Respondents	Percentage
Very satisfied	18	17.8%
Satisfied	55	54.5%
Neutral	25	24.8%
Dissatisfied	-	-
Very dissatisfied	3	3%

Interpretation

- As per the satisfaction analysis, most of the peoples are satisfied with the Hiranyakeshi Sugar Products and even many have shown extreme satisfaction towards it. However, a few respondents less satisfied were unhappy with the product and a portion of the respondents were indifferent about it.
- The results show that Hiranyakeshi Sugar Products had received a favourable response from its consumers. Majority of them rated highly the Quality, Taste, Purity, Availability and Reasonable Pricing of the Product.
- However, existence of Neutral and Dissatisfied Respondents indicates that their are Areas that need to improved Upon by the Factory especially Packaging, Promotional Activities and Customer Awareness hence will lead to Increased Customer Satisfaction leading to Improved Customer Loyalty in Future.

CHAPTER 5
FINDINGS, SUGGESTION, AND CONCLUSION

5.1 Findings

- To make sure that production is good quality sugar takes place, the company follows the traditional practices of quality control.
- The cooperative system helps local sugarcane farmers, and at the same time, it plays a big part in growing the rural economy.
- Similarly, this system supports farmers directly while also contributing to the overall development of rural communities.
- The factory has built a strong distribution network over the years, which is why its products reach several markets.
- During the internship, I got to learn about different functions of the company, including marketing, production, and customer service.

5.2 Suggestions

- The distribution system needs further enhancement so that products can reach local markets more easily.
- In the same way, this cooperative model benefits the sugarcane farmers while also aiding rural economic development.
- Along with helping local sugarcane producers, the cooperative system also supports the growth of the rural economy.
- The factory follows proper quality control methods to make sure the sugar produced meets good standards.
- During my internship, I have been able to gain practical skills in marketing, manufacturing, and customer service to comprehend organizational processes.
- The factory will work on enhancing their products and form a stronger relation with their customers through continuous market research.

5.3 Conclusion

The aim of the present study was to assess the extent of consumer satisfaction with sugar products produced by SHDDKN, Sankeshwar, as well as a number of other factors that affects consumers' purchasing decisions for these products.

An attempt was made to provide relevant details about consumers prefer for purchasing SHDDKN's sugar products. a study was carried out to determine how consumers perceived the product that the factory supplied. To assess customer opinion about different factors including the quality of products, price, packing, availability, taste, purity etc. data was gather through questionnaires administered to 100 respondents.

The questionnaire data show that most people who buy Hiranyakeshis sugar products are happy with them. However some people did have a complaints. They said that sometimes the quality of the sugar products is not the same. They also said that the price is not always good and the taste is not always great. Some people even had trouble finding the products.

All of these things can make a customer happy or not. That interestingly, even though people were worried about pricing and if it was possible to get the products the products' quality was still the important thing when they decided to buy. This means that Hiranyakeshis sugar products can still be improved in some ways. Some individuals lacked an opinion when asked about changes to the packaging or the advertising. They also didn't mention much about their experience, with the people who sell Hiranyakeshis sugar products.

Understanding this study's findings will assist SHDDKN, Sankeshwar create sensible plans for success in the future as an example, management can put together strategies that work for controlling distribution channels, guaranteeing improved customer service, creating better marketing strategies, improving product quality, etc. Consequently, this will allows them to maintain their competitiveness and grow quickly in the constantly expanding sugar product industry.
